Subject On DNR's Exemption of Streams in Texas County

Dear Friend,

It was with shock, anxiety, and downright horror that I read the article on page B2 of the most recent copy of the *Houston (Mo) Herald* announcing that of all the many streams in Texas County, Missouri, *two...* Spring Creek, in the Northwest corner of the county, and Indian Creek, near the center of the county were being exempted from the Federal Clean Water Standards. *This exempted stream flows right through, and is a very important part of, my farm and property!*

I do not understand why Indian Creek has been exempted from the Federal Clean Water Standards. *Much* human activity takes place *in the water* and on adjacent land. Since 1975, small country churches have held baptismal services in one of the three fairly deep holes of water on our property. When my father and mother were still alive, (they passed away in 2002) they hosted youth swim parties in Indian Creek and hot dog suppers on the stone banks. My family and I and friends swim and wade in the creek as often as possible. My married children bring their friends from Texas for vacations and immediately head for the creek. We fish and trap minnows and sometimes just go to the creek on hot days to cool off and enjoy the beauties of nature.

Church fellowships have been held by the creek. This beautiful stream is used for much recreation and "refreshment of the soul." How *or why* ANYONE could decide it should be exempted from the disposal of sewage or waste or any hurtful material at all is a great mystery and source of concern for me. Were public hearings announced and conducted about the possibility of these exemptions?

If this is allowed to be, a major asset of my 106 acre farm, which Indian Creek bisects from East to West, will be ruined. When my parents bought this farm, in 1956, one of the greatest deciding factors was the existence of this pristine, ever-flowing creek.

During the terrible dry years of the 1930s, people whose wells and ponds had gone dry came to

Indian Creek to get water to survive. They knew it was a constant, dependable source of clean water. This occurred again in the drought of the 1950s.

If this lovely, natural Ozark stream is allowed to be a drainage ditch for toxic or undesirable material, a tremendous wrong will have been perpetrated. Surely there has been a mistake. I have great respect for the DNR...your organization has been our defense against such things.

Please let me know, at your earliest convenience, what all of us affected by this need to do and when we need to do it, to officially register our unrelenting opposition to this exemption.

Yours Very Sincerely, and With All Best Wishes,

Howell W. Burkhead

Senior Pastor, First Baptist Church

Subject Re: Comment on Indian Creek UAA

History:

This message has been replied to and forwarded.

Dear Ms. Peery,

Thank you so much for your e-mail. Our farm's *west boundary* is approximately 1/2 to 3/4s of a mile *east* of the Indian Creek bridge on U.S. Highway 63. (Indian Creek bisects our 106 acre farm as it flows from the east to the west.) Our farm's *east boundary* (where Indian Creek, flowing west, enters our property, flowing under the Indian Creek Bridge over *Lilly Road* (a major county road). The three deeper holes of water where most of the activities I listed previously take place are essentially distributed evenly throughout the flow of the creek through our property. The two holes which have been most widely used through the years are at the center and western side, respectively, of the creek's course through our land. The pool farthest west on our land, what *we* call the "last hole" and which is known in the area as the "baptizing hole," has probably been the most widely used swimming place, although what we call the "middle hole" has been put to a lot of that use, too. The "middle hole" has been used for baptisms, too, though not as frequently as the "last hole." The "last hole" (please understand...I'm using country vernacular here) has a smaller rock bluff with natural rock stairs which lead easily down into the shallower downstream end of the pool. From there, swimmers, baptismal candidates, waders, goofers-off, coolers-off, children, teens, adults, old people, are able to walk eastward into the deepest part of the pool. It has a solid rock bottom. There is a discernible crack at almost the middle part of the pool. When you walk over that crack, you can feel the water temperature decrease and become noticeably colder...it is the opening of a spring.

I have been doing some fishing and wading in the "middle hole" this summer, and have been enjoying it immensely. My son and my cousin are planning to come in from Texas in a few weeks, and both are bringing their "ultra-lights"...excited about catching some fish. My son usually uses grubs or worms; my cousin and I prefer to catch small crawfish from the creek shallows just below the "middle hole" and use their tails as bait.

As in my early communications with you, I *plead* with you *not to exempt this gorgeous portion* of a lovely Ozark stream from clean water regulations and purity standards! I still cannot believe it was ever even considered.

When my parents bought this farm, back in 1955, a major factor in their choice of it as opposed to other places *was beautiful, restful, refreshing, clear Indian Creek*. Since I have returned to live out the rest of my days here on this land of my childhood (I didn't retire; I'm only 56...I just wanted to come home) one of my most major joys is retreating down the rocky hillside to Indian Creek. Please don't take this away from us.

Thank you very much,

Howell W. Burkhead

Mr. Burkhead,

We are reviewing all the comments we have received telling us how Missouri citizens use their creeks and I am trying to pin down exactly where swimming and wading, etc., occur.

Regarding your e-mailed comment (attached) on Indian Creek in Texas County: You mentioned three swimming holes on your property and baptisms, parties and just general fun in the creek. Can you tell me where your farm is (especially in relation to Hwy 63)? Also, if any of the activities you talked about occurred off of your property, could you locate them specifically (near what road crossings, etc.)?

Thank you for your comment and help,

Anne Peery

Subject Indian Creek

History:

This message has been forwarded.

Dear Ms. Peery,

I just talked with my son in Texas. He plans to move back here with us when he can. We have discussed this crisis extensively, and I called him at his work this morning to bring him up-to-date since I received your e-mail. I forwarded on to him your letter and my response.

Jim (my son) who said, "I've swam in Indian Creek on our land every summer since I *learned to swim!*" (I remember when he learned to swim...he was 5 years old, and my wife and I took him and his sister to Slover Aerobics Center in Fort Worth, Texas, to take lessons in the Olympic-size swimming pool there.) From the time he was 9 years old, he spent every summer up here in Missouri with my parents, his grandparents, and helped them on the farm. When he and Grandpa were finished with their work, hot and sweaty and dirty, they went down to Indian Creek and went swimming.

I should have told you that swimming hole they mostly used is about 4 to 5 feet deep for stretch of creek length 40 to 50 feet. (Of course, this depends on the weather and the rain...sometimes it's been deeper, sometimes it's been shallower.)

The "middle hole" I described in my earlier e-mail is about the same depth, for a longer stretch of length. It is bordered on the south shore by a tall bluff and is less easily accessible. One must go to the south end, where the shallows are, and wade on a gravel bar up to the depths. The bottom of this pool is solid rock, the same as the "baptizing" hole. We do more fishing in this area than swimming, although we wade a lot...and sit around in it a lot, just to get cool on a hot day.

The depth of these pools does vary from time to time depending upon the washing of gravel. Sometimes gravel bars will build up in places which were formerly clear of gravel and the rock bottom could be reached. At times, gravel bars will be washed away and that area will be deeper.

My son said, "Dad, maybe someone has just looked at Indian Creek from the *bridges*, and evaluated the whole of the creek from the shallows they saw there." He said, "They need to see *all of the creek*."

Accordingly, Ms. Peery, I am inviting you to come visit my wife and me at our home. Let us show you the areas of which I have spoken. I will be happy to point out to you where many of our most enjoyable times have been spent and our happiest memories reside.

Still, this stretch of Indian Creek is typical and equivalent of all the other tributaries within the same distance of their confluence with Piney River...indeed, with the rest of the Piney River

watershed. None of us can imagine why *our part* should be exempted from clean water standards!

We have (my parents before me, and my wife, son, daughter, and I) have worked for decades to preserve the purity and the beauty Indian Creek and its adjacent bottoms and hillsides. We have cared for it and loved it. We are very much confused as to why our commitment should not be shared and backed up by your department.

Yours very graciously,

Howell W. Burkhead

August 21, 2008

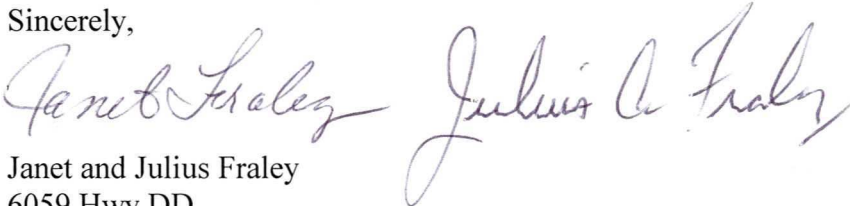

Dear Sirs:

We agree with the DNR internal review committee that designation for Water Body ID # 1591 as a Whole Body Contact Recreation (WBCR) should be removed.

Our property borders almost $\frac{3}{4}$ of a mile of this intermittent stream. As both of the Use Attainability Analysis studies contracted by DNR have shown, the stream does not meet and will not in the future meet the criteria for WBCR protection. We have occupied these properties since 1971 and Janet has lived within $\frac{1}{2}$ mile of this section since 1950. In all these years the creek in the area of our property has flowed less than 1 foot deep and goes completely dry (even the pools) almost every year, sometimes as early as May. Water flow usually does not return until fall rains. This area of the drainage does not support any of the listed types of recreation such as fishing and swimming.

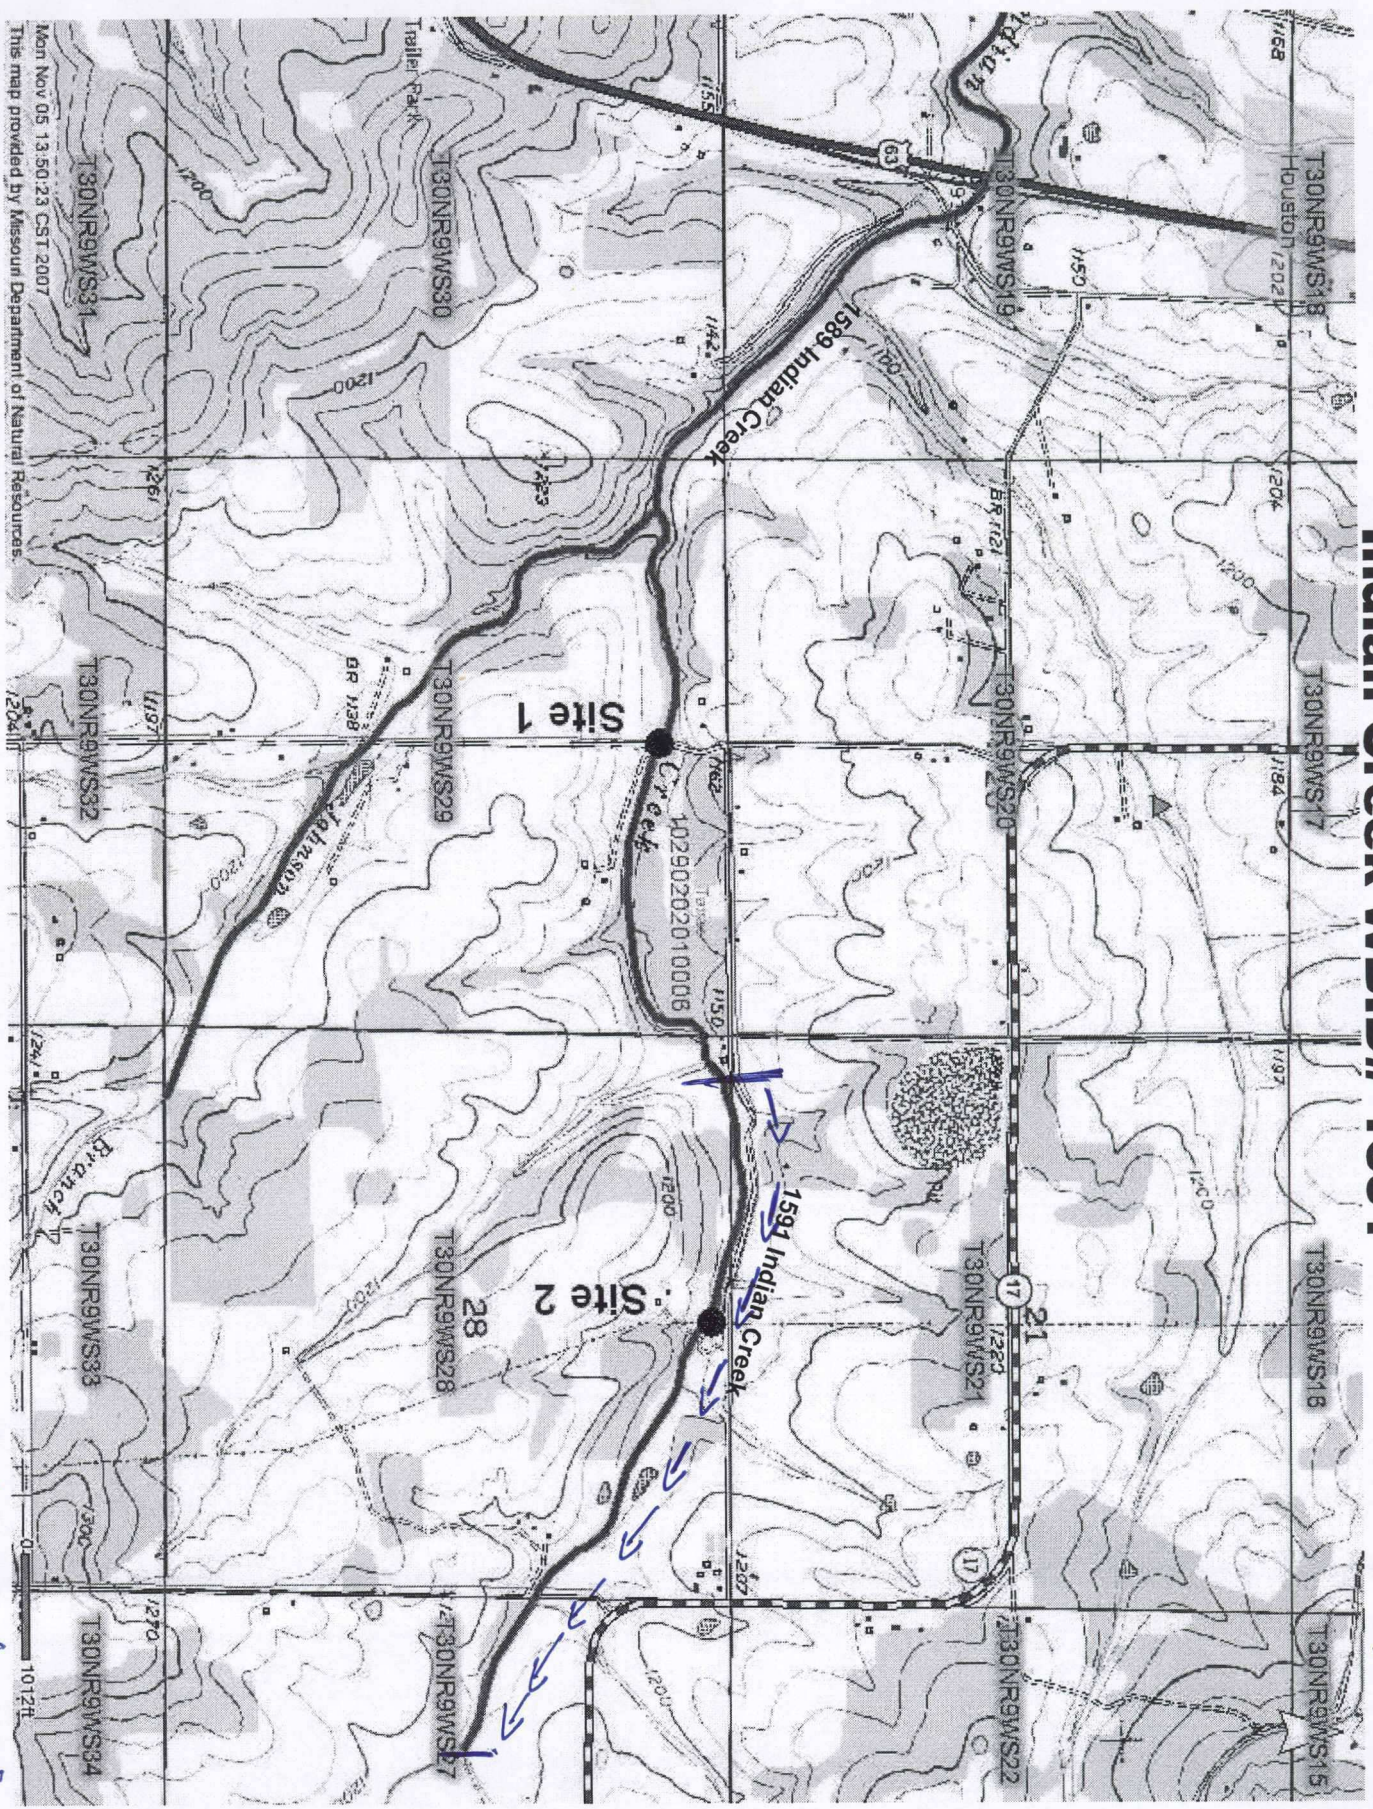

We request that MDNR comply with the law and its intent and remove this section from the WBCR designation.

Sincerely,

Handwritten signatures of Janet Fraley and Julius A. Fraley in cursive script.

Mr Hoke,

I have received numerous calls regarding the DNR proposal for Indian Creek . It is also my understanding that several negative responses were forwarded to you and DNR on this issue.

I would like to know what DNR has decided so I can answer questions an they come in. Most recently I was contacted by the Texas County Commissioner's who are also fielding calls against the proposal .

A letter to the city, Houston Herald and Texas County Commissioner's advising us of the status would be appreciated.

Thank you.

Larry Sutton

John Hoke,

Dear Sir,

I am disappointed that DNR would even consider allowing Indian Creek to be exempt from pollution rules. Your article stated Indian Creek was 2 miles south of Houston, it is actually less than 1 mile from current city limits and future growth of the city would likely incorporate a large section of Indian Creek.

As a city we are responsible to maintain water quality and are regulated as to what we put into the waste stream.

In closing, I am totally against Indian Creek being exempt from the pollution rules.

Sincerely,

Larry Sutton
City Administrator-Houston, MO.

Phone Log
2007 UAA Public Comments

Date: ____ August 27, 2008 ____

Time: ____ 9:40 a.m. ____

Caller: ____ Anne Peery ____

Contacted: ____ Susan Warkentin ____

Phone number: ____ 417-967-1951 ____

Water Body Name: ____ Indian Creek ____

WBID: ____ 1591 ____ **UAAs:** ____ 0546 & 0821 ____

County: ____ Texas ____

Reason for contact:

In her Stream Usage Survey submitted 7/7/08, Ms. Warkentin stated people swam and fished in an area that covered both the UAA segment (WBID 1591) and the downstream segment (WBID 1589). I wanted to clarify to make sure which (or both).

Comments:

She could not really narrow it down closer than between Hwy 63 and Lilly Road. I had already discovered that there is a large farm in that area that has three swimming holes, two of them used for baptisms and at least one hole in each of the two water body segments of Indian Creek. Ms. Warkentin stated she knew of baptisms as well as general swimming. Conclusion: Her comment cites WBCR and SCR existing uses in both segments.

UAA Coordinator
Water Protection Program
P.O. Box 176
Jefferson City, Mo. 65102

As a resident of Texas Co. I am writing to state my opposition to the exemption of two County Streams, Indian Creek and Spring Creek, from federal Clean Water Act protection. Streams in this region are visited ~~by~~ families for cooling off and swimming in summer months. If wastewater were not disinfected, participants of these activities would be exposed to unhealthy contaminants.

Members of the Houston City Council went on record opposing the exemption of Indian Creek which is about 2 miles south of the town.

I encourage continued protection of these streams.

Sincerely,
Leann Harrell

WBID: ___ 1591 _____ **UAAs:** ___ 546 and 821 _____

County: ___ Texas _____

Reason for contact:

Leann wrote a comment letter on this creek stating that “streams in this region are visited by families for cooling off and swimming in summer months”. She mentioned Indian and Spring creeks in particular. I needed to pin point exactly where such use occurred.

Comments:

She stated that hers were general comments about the creek. She does not live along the creek and does not personally know anyone who does or specifically where the creek is used. I told her we had other comments that were specific, so she did not have to do any more digging. I explained what we were trying to do with UAAs, how they are conducted and that removing the WBCR use does not mean there are no limits or controls on WWTPs. She was quite satisfied.
